Hello ClickHouse SQL Console Team,

I'm applying for the Full Stack Software Engineer role on SQL Console. Rich, state-heavy interfaces over live data are what I most enjoy building.

I've built several: a DEX trading UI for Cypher, live price charts for Tsunami Finance, dashboards for Clockwork, and at Ralli a Next.js app on NestJS services with live WebSocket updates. At Applied Intuition I built the license dashboard that showed clients their product-usage trends, and it helped close multiple million dollar deals. At Lancer I built a GitHub app and a browser extension, which is the closest I've come to developer tooling inside someone else's environment.

To be direct about gaps: I haven't built a query editor with Monaco or a VS Code extension, and I haven't used ClickHouse; my SQL has been Postgres. I'm based in Utah, so US-remote.

I'd be glad to talk about the role.

Jack Sturtevant
