Hello ClickHouse Growth Team,

I'm applying for the Senior Frontend Software Engineer role on Growth. Growth work is product engineering where you can see the effect, and I've been doing it as a founder.

At Ralli I built the Next.js app and shipped friends, leaderboards, notifications and referrals to drive engagement, on top of NestJS services with live WebSocket updates. Before that I built real-time front ends: a DEX trading UI for Cypher, live price charts for Tsunami Finance, and dashboards for Clockwork. At Applied Intuition I built the license dashboard that showed clients their product usage trends, and it helped close multiple million dollar deals.

To be direct about gaps: I haven't run a formal A/B testing program with a tool like GrowthBook or Optimizely, and I haven't used ClickHouse itself.

I'd be glad to talk about the role.

Jack Sturtevant
