# Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

## SUMMARY

Backend engineer and two-time founder/CTO with seven years of production software. I design access control into the services I build: a Go data gateway with scoped, revocable, device-bound tokens, refresh-reuse rejection, rate limits, per-app data isolation and an audit log. Go, TypeScript, SQL.

## SKILLS AND PROFILES

**Skills** : Authorization / Scoped Tokens | API Keys / Token Lifecycle | Multi-Tenant Isolation | Audit Logging | Go | TypeScript / NestJS | Postgres
SQL | API Design | CI/CD | Docker | Kubernetes (ArgoCD) | AWS / GCP | Python
**Profiles** : LinkedIn jack-sturtevant | Github jacksturt

## EXPERIENCE

**Coordinator, LLC** Remote
*Lead Engineer (Contractor)* March 2026 – September 2026

- Data gateway with scoped, revocable, device-bound tokens, refresh-reuse rejection, rate limits, audit log; 28 tests
- Grew the gateway into an app store: template registry, per-app data storage, 3-way merge for template updates
- Built agent tools (Go): workspace app write/edit tools and read-only cross-app data tools with exact tool contracts
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run
- Worked agentic-first (Claude Code, Cursor) on every part of the stack, with tests gating each release

**Ralli** Remote
*Founder / CTO* January 2025 – October 2025

- Founded a real-time social sports betting platform; led the engineering team (full-time from July 2025)
- Built NestJS/Drizzle/Postgres domain services (games, matchups, lines, friends, leaderboards, notifications) with live WebSocket updates and Datadog tracing
- Built the betting-line and roster ingestion pipeline (ESPN APIs) and live projections from play-by-play data

**Independent Engineer** Remote
*Founder / Freelance Engineer, startups* October 2021 – December 2024

- Lancer (2022 – 2023): founder/CTO of a freelance platform (Next.js, tRPC, Prisma, escrowed payments); led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability

**Applied Intuition** Mountain View, CA
*Software Engineer* July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

## EARLY EXPERIENCE

- Hydraze (CTO, 2019 – 2020): IoT sensor network collecting facilities data, plus a platform to view device and usage data
- AWS (SDE Intern, 2019): enabled mathematical verification of AWS products through compilation from Dafny to Java
- Java and C++ (college and early career): learned to code on Java; C++ / CUDA for robotics and ML research

## EDUCATION

**A. James Clark School of Engineering, University Of Maryland** **GPA: 3.93**
*Bachelor of Science in Computer Engineering, University Honors, Cum Laude*
