Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133 | Salt Lake City, UT

SUMMARY

University of Maryland computer engineering graduate and data-focused software engineer with seven years of building pipelines that turn real-world video, sensor, and third-party data into tools people use, plus dashboards and internal tools that teams rely on to make decisions. Python, Go, SQL/Postgres, TypeScript.

EDUCATION

A. James Clark School of Engineering, University Of Maryland **GPA: 3.93**
Bachelor of Science in Computer Engineering, 2020, University Honors, Cum Laude

- QUEST: Honors program focused on business and technology collaboration for solving complex design challenges

SKILLS AND PROFILES

Skills : Python | SQL / Postgres | ETL / Data Pipelines | Go | Sensor Data | Video Pipelines
Data Modeling | Object Storage / MinIO | Dashboards | Internal Tools | React / Next.js | TypeScript
WebSockets | Datadog | Docker | CI/CD | AWS / GCP | Git
Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC Remote
Lead Engineer (Contractor) March 2026 – September 2026

- Video analysis pipeline: vision-model inference over real-world footage, with thresholds and frame preprocessing tuned against a scoring harness; clip and frame storage on MinIO + Postgres
- Built IMU sensor-data and video pose-estimation pipelines that turned raw motion data into usable analysis
- Go data gateway for third-party apps: scoped, revocable tokens, rate limits, audit log, and per-app data storage
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run
- Also built LLM tooling: fine-tuning on H100 GPUs with a feedback-retraining loop, and agent tools with exact contracts

Applied Intuition Mountain View, CA
Software Engineer July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage trends
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

Ralli Remote
Founder / CTO January 2025 – October 2025

- Built ETL pipelines loading betting lines and athlete/roster data from ESPN's public APIs into a normalized Postgres store on a 12-hour cron
- Built live projections from play-by-play data, and NestJS/Drizzle/Postgres services with live WebSocket updates and Datadog tracing
- Designed the data model and ingestion cadence; led the engineering team (full-time from July 2025)

Independent Engineer Remote
Founder / Freelance Engineer, startups October 2021 – December 2024

- Real-time front ends: DEX trading UI for Cypher, live price charts for Tsunami Finance, dashboards for Clockwork
- Banger (2024): interim CTO; built a tokenized-tweet trading platform with live price and volume charts in 8 weeks, which led to a $250K raise
- Lancer (2022 – 2023): founder/CTO of a freelance platform (Next.js, tRPC, Prisma, escrowed payments); led 7 people
- Trustless Engineering (2024): Kubernetes deployments via ArgoCD (not cluster operations), ML infrastructure, Datadog observability

EARLY EXPERIENCE

- Hydraze (Co-founder / CTO, 2019 – 2020): IoT sensor network (Raspberry Pi + Arduino) and device-data platform
- AWS (SDE Intern, 2019): enabled mathematical verification of AWS products through compilation from Dafny to Java
