Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

SUMMARY

Computer engineer and two-time founder/CTO with seven years of building and operating production systems, recently GPU platforms. Ran H100 training and inference workloads, self-hosted GPU services on Linux, Kubernetes with Datadog observability, and the CI that gates releases. Earlier: C++ / CUDA for robotics and ML, and an IoT sensor network. Makes calls from measured data: benchmark, compare, then switch.

SKILLS AND PROFILES

Skills : GPU Platforms (H100) | CUDA | Linux | Python | Bash | Computer Engineering (BS) | Kubernetes | Docker | Monitoring (Datadog) | SQL / Fleet Data Analysis | AWS / GCP | C++ (earlier)
Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC — Remote
Lead Engineer (Contractor) — March 2026 – September 2026

- Ran multi-sport LLM fine-tuning and quantized vLLM serving on remote H100s: corpus curation, training runs, feedback-retraining loop
- Operated self-hosted GPU services on Linux (Whisper STT, TTS engines, VLM video inference); benchmarked engines on latency and compatibility and swapped them on the data
- Built self-hosted CI for the end-to-end suite: serial/parallel job split, runs on every release merge, cut per-run cost by switching the LLM backend
- Containerized GPU vision service with an async job tracker; tuned confidence thresholds and preprocessing from measured results in Postgres

Ralli — Remote
Founder / CTO — January 2025 – October 2025

- Founded a real-time sports platform; led and mentored the engineering team from part-time to full-time (July 2025)
- Ran production on managed cloud services (Supabase Postgres) with Datadog tracing
- Built scheduled ingestion of live betting-line and roster data into a normalized Postgres store

Independent Engineer — Remote
Founder / Contract Engineer, startups — October 2021 – December 2024

- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability
- Lancer (2022 – 2023): founder/CTO of a freelance platform; led and mentored a 7-person team
- Banger (2024): interim CTO; shipped a trading platform in 8 weeks that led to a $250K raise

Applied Intuition — Mountain View, CA
Software Engineer — July 2020 – October 2021

- Built a license analytics dashboard of client product-usage trends; it helped close multiple million dollar deals
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk triage and routing solution
- Developed (full stack) intranet for managing developers, teams, and customers

HARDWARE & EARLY EXPERIENCE

- Hydraze (CTO, 2019 – 2020): built and deployed an IoT sensor network (Raspberry Pi + Arduino) collecting facilities data, with a platform for device health and usage
- C++ / CUDA (college and early career, about 5 years ago): robotics research and ML, including master's-level C++ coursework
- AWS (SDE Intern, 2019): enabled mathematical verification of AWS products through compilation from Dafny to Java

EDUCATION

A. James Clark School of Engineering, University Of Maryland — **GPA: 3.93**
Bachelor of Science in Computer Engineering, University Honors, Cum Laude
