Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

SUMMARY

ML engineer and two-time founder/CTO with seven years of production software, most recently GPU inference and computer vision: quantized vLLM serving, video pipelines, and latency work measured on real requests, on NVIDIA H100s and ARM64 GB10 hardware. Earlier C++ for robotics and ML, down to the CUDA level. Python, Go, TypeScript.

SKILLS AND PROFILES

Skills : Python | PyTorch | GPU Inference (vLLM) | Quantization (FP8 / FP4 / INT4) | Computer Vision | YOLOv8 Docker | Kubernetes (ArgoCD deploys) | AWS / GCP | CI/CD | Datadog | Go | C++ / CUDA (earlier)
Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC Remote
Lead Engineer (Contractor) March 2026 – September 2026

- Fine-tuned multi-sport LLMs on 1 to 8 H100s (LoRA with NeMo and Unsloth); wrote FP8/FP4/INT4 quantization for vLLM serving
- Built a CV pipeline for All-22 football film: YOLOv8-pose motion signal, K-means player classification, pixel-to-field homography, and Hungarian matching to playbooks, with an async job tracker, Postgres, and object storage
- VLM video inference (Qwen3-VL, Cosmos-Reason2): tuned frame preprocessing and thresholds against a scoring harness
- Timed single-shot vs. agent-loop tiers on real requests; single-shot was 4-6x faster, so I added it as a fourth tier
- Moved GPU voice services (Whisper, TTS) to ARM64 NVIDIA hardware, swapping TTS engines for compatibility and latency
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge

Ralli Remote
Founder / CTO January 2025 – October 2025

- Founded a real-time social sports betting platform and led the engineering team (full-time from July 2025)
- Built NestJS/Drizzle/Postgres services with live WebSocket updates and Datadog tracing, plus live projections from play-by-play data

Independent Engineer Remote
Founder / Freelance Engineer, startups October 2021 – December 2024

- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability
- Lancer (2022 – 2023): founder/CTO of a freelance platform (Next.js, tRPC, Prisma, escrowed payments); led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise

Applied Intuition Mountain View, CA
Software Engineer July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

EARLY EXPERIENCE

- C++ / CUDA (college and early career, about 5 years ago): robotics and ML projects, master's-level C++ courses, and senior-year robotics research
- Hydraze (CTO, 2019 – 2020): IoT sensor network (Raspberry Pi + Arduino) and device-management platform
- AWS (SDE Intern, 2019): enabled mathematical verification of AWS products through compilation from Dafny to Java
- Harvard medical lab (first job): worked on early lab-on-a-chip experiments

EDUCATION

A. James Clark School of Engineering, University Of Maryland **GPA: 3.93**
Bachelor of Science in Computer Engineering, University Honors, Cum Laude
