Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

SUMMARY

Two-time founder/CTO with seven years of setting technical direction and building the systems behind it: escrowed payments with checkpoints and ACH payouts, a Go data gateway grown into an app store, and real-time services on NestJS and Postgres. Led teams of up to seven at startup scale. Kubernetes experience is deployment via ArgoCD.

SKILLS AND PROFILES

Skills : Technical Direction | Architecture / Data Models | Payments | Build vs. Buy | Mentoring
TypeScript | React / Next.js | Go | Python | Postgres / SQL | Observability / Datadog | CI/CD
AWS / GCP | Kubernetes (light)
Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC Remote
Lead Engineer (Contractor) March 2026 – September 2026

- Go data gateway for third-party apps (scoped, revocable tokens) that grew into an app store: template registry, per-app data storage, 3-way merge for template updates
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run
- Built agent tools (Go): workspace app write/edit tools and read-only cross-app data tools with exact tool contracts
- Timed single-shot vs. agent-loop tiers on real requests; single-shot was 4-6x faster, so I added it as a fourth tier
- Agent runtime (Python): group-scoped memory pruning, voice-agent memory, reviewed-turn training-data pipeline

Ralli Remote
Founder / CTO January 2025 – October 2025

- Founded a real-time social sports betting platform; led the engineering team (full-time from July 2025)
- Built NestJS/Drizzle/Postgres domain services (games, matchups, lines, friends, leaderboards, notifications) with live WebSocket updates and Datadog tracing
- Rebuilt the product as a Turborepo monorepo: a Next.js web app and a NestJS server
- Built the betting-line and roster ingestion pipeline (ESPN APIs) and live projections from play-by-play data

Independent Engineer Remote
Founder / Freelance Engineer, startups October 2021 – December 2024

- Lancer (2022 – 2023): founder/CTO; escrowed payments with ACH payouts (Coinflow), quotes, checkpoints, in-app messaging; led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Trustless Engineering (2024): Kubernetes deployments via ArgoCD (not cluster operations), ML infrastructure, Datadog observability
- Lancer: GitHub app and browser extension linking bounties to pull requests; a linked PR closing paid its author from escrow

Applied Intuition Mountain View, CA
Software Engineer July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

Hydraze, Inc College Park, MD
Chief Technology Officer January 2019 – July 2020

- Built an IoT sensor network (Raspberry Pi + Arduino) for facilities data collection, plus a device/usage management platform

Amazon Web Services Seattle, WA
SDE Intern May 2019 – August 2019

- Enabled mathematical verification of AWS products through compilation from Dafny to Java, see Github

EDUCATION

A. James Clark School of Engineering, University Of Maryland **GPA: 3.93**
Bachelor of Science in Computer Engineering, University Honors, Cum Laude

- QUEST : Honors program focused on business and technology collaboration for solving complex design challenges
