Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

SUMMARY

Engineer and two-time founder/CTO with seven years of running what I built: self-hosted CI/CD, GPU services in Docker on Linux, Datadog tracing, and automation in Go and Python. Kubernetes is light for me: I have deployed to it with ArgoCD but have not owned a production cluster, and I have not written Terraform in depth or held an SRE title.

SKILLS AND PROFILES

Skills : Go | Python | Self-hosted CI/CD | Docker | Linux | GCP / AWS | Datadog / Tracing | Automation
Kubernetes (light) | Git | Postgres / SQL | GPU Services | Root-cause Debugging
Rate Limits / Tokens

Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC Remote
Lead Engineer (Contractor) March 2026 – September 2026

- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run
- Benchmarked self-hosted Whisper and TTS engines, then shipped production voice messaging (STT/TTS) in the web app
- Go data gateway for third-party apps: scoped, revocable, device-bound tokens, refresh-reuse rejection, rate limits, audit log
- Multi-sport LLM fine-tuning on H100s: corpus curation, feedback-retraining loop, quantized vLLM serving
- Agent runtime (Python): group-scoped memory pruning, voice-agent memory, reviewed-turn training-data pipeline

Ralli Remote
Founder / CTO January 2025 – October 2025

- Built NestJS/Drizzle/Postgres domain services (games, matchups, lines, friends, leaderboards, notifications) with live WebSocket updates and Datadog tracing
- Founded a real-time social sports betting platform; led the engineering team (full-time from July 2025)
- Rebuilt the product as a Turborepo monorepo: a Next.js web app and a NestJS server
- Built the betting-line and roster ingestion pipeline (ESPN APIs) and live projections from play-by-play data

Independent Engineer Remote
Founder / Freelance Engineer, startups October 2021 – December 2024

- Lancer (2022 – 2023): founder/CTO of a freelance platform (Next.js, tRPC, Prisma, escrowed payments); led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Trustless Engineering (2024): Kubernetes deployments via ArgoCD (not cluster operations), ML infrastructure, Datadog observability
- Lancer: GitHub app and browser extension linking bounties to pull requests; a linked PR closing paid its author from escrow

Applied Intuition Mountain View, CA
Software Engineer July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

Hydraze, Inc College Park, MD
Chief Technology Officer January 2019 – July 2020

- Built an IoT sensor network (Raspberry Pi + Arduino) for facilities data collection, plus a device/usage management platform

Amazon Web Services Seattle, WA
SDE Intern May 2019 – August 2019

- Enabled mathematical verification of AWS products through compilation from Dafny to Java, see Github

EDUCATION

A. James Clark School of Engineering, University Of Maryland **GPA: 3.93**
Bachelor of Science in Computer Engineering, University Honors, Cum Laude

- QUEST : Honors program focused on business and technology collaboration for solving complex design challenges
