Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

SUMMARY

Backend engineer and two-time founder/CTO with seven years of building production systems and leading the teams behind them. Built Go services (a data gateway with rate limits and an audit log), NestJS services with Datadog tracing, Kubernetes deployments with ArgoCD, and self-hosted CI/CD; led engineering at two companies. Go, Python, Rust.

SKILLS AND PROFILES

Skills : Go | Python | Rust | Technical Leadership | Kubernetes (ArgoCD deploys) | Observability (Datadog) | Cloud Services
TypeScript / Node.js | Postgres | Docker | AWS / GCP | CI/CD | Mentoring | Remote Teams
Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC Remote
Lead Engineer (Contractor) March 2026 – September 2026

- Data gateway with scoped, revocable, device-bound tokens, refresh-reuse rejection, rate limits, audit log; 28 tests
- Go data gateway for third-party apps (scoped, revocable tokens) that grew into an app store: template registry, per-app data storage, 3-way merge for template updates
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run
- Built agent tools (Go): workspace app write/edit tools and read-only cross-app data tools with exact tool contracts
- Video storage and inference pipeline: clips and frames on MinIO with Postgres metadata, feeding VLM scoring
- Timed single-shot vs. agent-loop tiers on real requests; single-shot was 4-6x faster, so I added it as a fourth tier

Ralli Remote
Founder / CTO November 2024 – October 2025

- Built NestJS/Drizzle/Postgres domain services with live WebSocket updates and Datadog tracing
- Founded a real-time social sports betting platform; led the engineering team (full-time from July 2025)
- Built the betting-line and roster ingestion pipeline (ESPN APIs) and live projections from play-by-play data
- Wrote on-chain bet-submission and line-resolution programs (Rust/Anchor); integrated embedded wallets

Independent Engineer Remote
Founder / Freelance Engineer, startups October 2021 – December 2024

- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability
- Lancer (2022 – 2023): founder/CTO of a freelance platform (Next.js, tRPC, Prisma, escrowed payments); led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Particles, Cherry Labs, Cypher: on-chain raffles (3,500+ tickets sold), GPU-rental marketplace, trading UIs

Applied Intuition Mountain View, CA
Software Engineer July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees

Hydraze, Inc College Park, MD
Chief Technology Officer January 2019 – July 2020

- Built an IoT sensor network (Raspberry Pi + Arduino) for facilities data collection, plus a device/usage management platform

Amazon Web Services Seattle, WA
SDE Intern May 2019 – August 2019

- Enabled mathematical verification of AWS products through compilation from Dafny to Java, see Github

EDUCATION

A. James Clark School of Engineering, University Of Maryland **GPA: 3.93**
Bachelor of Science in Computer Engineering, University Honors, Cum Laude

- QUEST : Honors program focused on business and technology collaboration for solving complex design challenges
