Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

SUMMARY

Backend engineer and two-time founder/CTO with seven years of building production backends. Most recently built Go agent tools and read-only cross-app data tools, a Python agent runtime with memory, eval and scoring harnesses, and measured agent-loop vs. single-shot tiers on real requests. Go, Python, Rust, Postgres.

SKILLS AND PROFILES

Skills : Go | Python | Retrieval / RAG | Agentic Reasoning Loops | Evals / Scoring Harnesses | Multi-Tenant APIs | Postgres | Rust | Kubernetes (ArgoCD deploys) | Docker | AWS / GCP | Datadog | CI/CD | TypeScript

Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC — Remote

Lead Engineer (Contractor) — March 2026 – September 2026

- Built agent tools (Go): workspace app write/edit tools and read-only cross-app data tools with exact tool contracts
- Agent runtime (Python): group-scoped memory pruning, voice-agent memory, reviewed-turn training-data pipeline
- Timed single-shot vs. agent-loop tiers on real requests; single-shot was 4-6x faster, so I added it as a fourth tier
- Data gateway with scoped, revocable, device-bound tokens, refresh-reuse rejection, rate limits, audit log; 28 tests
- VLM video pipeline (Qwen3-VL, Cosmos-Reason2) for formation detection: tuned thresholds, scoring harness, MinIO + Postgres
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run

Ralli — Remote

Founder / CTO — November 2024 – October 2025

- Built NestJS/Drizzle/Postgres domain services with live WebSocket updates and Datadog tracing
- Founded a real-time social sports betting platform; led the engineering team (full-time from July 2025)
- Built the betting-line and roster ingestion pipeline (ESPN APIs) and live projections from play-by-play data
- Wrote on-chain bet-submission and line-resolution programs (Rust/Anchor); integrated embedded wallets

Independent Engineer — Remote

Founder / Freelance Engineer, startups — October 2021 – December 2024

- Lancer (2022 – 2023): founder/CTO of a Solana escrow freelance platform; led 7 people; won $30K at Grizzlython
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability
- Particles, Cherry Labs, Cypher: on-chain raffles (3,500+ tickets sold), GPU-rental marketplace, trading UIs

Applied Intuition — Mountain View, CA

Software Engineer — July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees

Hydraze, Inc — College Park, MD

Chief Technology Officer — January 2019 – July 2020

- Built an IoT sensor network (Raspberry Pi + Arduino) for facilities data collection, plus a device/usage management platform

Amazon Web Services — Seattle, WA

SDE Intern — May 2019 – August 2019

- Enabled mathematical verification of AWS products through compilation from Dafny to Java, see Github

EDUCATION

A. James Clark School of Engineering, University Of Maryland — **GPA: 3.93**

Bachelor of Science in Computer Engineering, University Honors, Cum Laude

- QUEST : Honors program focused on business and technology collaboration for solving complex design challenges
