# Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

## SUMMARY

Software engineer and two-time founder/CTO with seven years of building scalable services and the CI around them, including Go and NestJS services on Postgres and escrowed payments. I use LLMs daily to speed up engineering: designing prompts, checking outputs, and integrating models into products. TypeScript, Go, Python, SQL.

## SKILLS AND PROFILES

**Skills** : TypeScript | Node.js / NestJS | Go | Python | Java (earlier, not recent) | Postgres / SQL
Service Design | Payments | CI/CD | AWS / GCP | LLM Integration | Claude Code | React / Next.js
Observability / Datadog

**Profiles** : LinkedIn jack-sturtevant | Github jacksturt

## EXPERIENCE

**Coordinator, LLC** — Remote
*Lead Engineer (Contractor)* — March 2026 – September 2026

- Go data gateway for third-party apps: scoped, revocable, device-bound tokens, refresh-reuse rejection, rate limits, audit log
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run
- Built agent tools (Go): workspace app write/edit tools and read-only cross-app data tools with exact tool contracts
- Timed single-shot vs. agent-loop tiers on real requests; single-shot was 4-6x faster, so I added it as a fourth tier
- Agent runtime (Python): group-scoped memory pruning, voice-agent memory, reviewed-turn training-data pipeline

**Ralli** — Remote
*Founder / CTO* — January 2025 – October 2025

- Founded a real-time social sports betting platform; led the engineering team (full-time from July 2025)
- Built NestJS/Drizzle/Postgres domain services (games, matchups, lines, friends, leaderboards, notifications) with live WebSocket updates and Datadog tracing
- Rebuilt the product as a Turborepo monorepo: a Next.js web app and a NestJS server
- Built the betting-line and roster ingestion pipeline (ESPN APIs) and live projections from play-by-play data

**Independent Engineer** — Remote
*Founder / Freelance Engineer, startups* — October 2021 – December 2024

- Lancer (2022 – 2023): founder/CTO; escrowed payments with ACH payouts (Coinflow), quotes, checkpoints, in-app messaging; led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability
- Lancer: GitHub app and browser extension linking bounties to pull requests; a linked PR closing paid its author from escrow

**Applied Intuition** — Mountain View, CA
*Software Engineer* — July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

**Hydraze, Inc** — College Park, MD
*Chief Technology Officer* — January 2019 – July 2020

- Built an IoT sensor network (Raspberry Pi + Arduino) for facilities data collection, plus a device/usage management platform

**Amazon Web Services** — Seattle, WA
*SDE Intern* — May 2019 – August 2019

- Enabled mathematical verification of AWS products through compilation from Dafny to Java, see Github

## EDUCATION

**A. James Clark School of Engineering, University Of Maryland** — **GPA: 3.93**
*Bachelor of Science in Computer Engineering, University Honors, Cum Laude*

- QUEST : Honors program focused on business and technology collaboration for solving complex design challenges
