Hello ClickHouse Team,

I'm applying for the Senior Cloud Software Engineer, Efficiency Engineering role. The posting asks for someone who finds and ships cost and performance wins across cloud infrastructure and builds tooling that shows the business where the money goes.

This year at Coordinator I built a Go data gateway with scoped, revocable tokens, rate limits, and an audit log, self-hosted CI/CD that runs the end-to-end suite on every release merge, and an LLM fine-tuning and vLLM serving pipeline on H100s. Before that I founded Ralli, where I built NestJS and Postgres services with live WebSocket updates and Datadog tracing and the pipeline that loaded betting lines into Postgres, and led the engineering team.

To be direct: my cost work has been at startup scale, and I haven't built service meshes or large distributed infrastructure. I'd be glad to talk about whether my background fits what the team needs.
