Hello ClickHouse Team,

I'm applying for the Senior Infrastructure Engineer, Postgres role. The posting asks for someone who owns Postgres reliability and operations, with Go tooling and strong observability.

This year at Coordinator I built a Go data gateway with scoped, revocable tokens, rate limits, and an audit log, self-hosted CI/CD that runs the end-to-end suite on every release merge, and an LLM fine-tuning and vLLM serving pipeline on H100s. Before that I founded Ralli, where I built NestJS and Postgres services with live WebSocket updates and Datadog tracing and the pipeline that loaded betting lines into Postgres, and led the engineering team.

To be direct: I've built on Postgres for years but haven't operated it at fleet scale (upgrades, replication, multi-cloud provisioning), and I haven't used Terraform in production. I'd be glad to talk about whether my background fits what the team needs.
