Hello ClickHouse Team,

I'm applying for the Senior Software Engineer, Cloud Infrastructure role. The posting asks for someone who builds reliable cloud infrastructure, security tooling, and automation for a SaaS platform.

This year at Coordinator I built a Go data gateway with scoped, revocable tokens, rate limits, and an audit log, self-hosted CI/CD that runs the end-to-end suite on every release merge, and an LLM fine-tuning and vLLM serving pipeline on H100s. Before that I founded Ralli, where I built NestJS and Postgres services with live WebSocket updates and Datadog tracing and the pipeline that loaded betting lines into Postgres, and led the engineering team.

To be direct: my Kubernetes work was one 2024 engagement, and I haven't built service meshes, PKI, or routing at ClickHouse's scale. I'd be glad to talk about whether my background fits what the team needs.
