Hello ClickHouse Team,

I'm applying for the Senior Software Engineer, Integrations AI/ML role. The posting asks for someone with a practitioner's view of ML work who can make ClickHouse a natural fit in RAG and agent architectures.

This year at Coordinator I built a Go data gateway with scoped, revocable tokens, rate limits, and an audit log, self-hosted CI/CD that runs the end-to-end suite on every release merge, and an LLM fine-tuning and vLLM serving pipeline on H100s. Before that I founded Ralli, where I built NestJS and Postgres services with live WebSocket updates and Datadog tracing and the pipeline that loaded betting lines into Postgres, and led the engineering team.

To be direct: I haven't maintained a public Python connector or SDK, and my ML experience is as an engineer shipping ML systems rather than as a data scientist. I'd be glad to talk about whether my background fits what the team needs.
