Hello Databricks Team,

I'm applying for the Specialist Solutions Architect role knowing it's a stretch. The posting asks for 6+ years in solutions architecture or pre-sales and deep Spark and Kafka experience, and I don't have either. I haven't worked in financial services or pre-sales, and I haven't used the Databricks platform in production.

What I do have is data pipeline experience and a record of working directly with customers. At Applied Intuition I built a customer-facing license dashboard that showed product usage and helped close multi-million dollar deals, and I rebuilt customer support so response times dropped from over a day to under an hour. At Ralli and Coordinator I built ingestion and video pipelines on Postgres and MinIO, and I taught at Turbin3. I can explain a technical design to an engineer or an executive.

I'd be glad to talk about whether that could be useful to your financial services customers.
