Hello Flatiron Health Team,

I'm applying for the Senior Software Engineer role in Data Engineering because I like building data pipelines other people can trust.

At Ralli I built the ingestion pipeline that moved betting lines and athlete data into Postgres on a schedule, then led the team that extended it. At Coordinator I built a video pipeline with storage on MinIO and Postgres, plus the CI/CD that gated every release. I haven't worked with clinical or healthcare data, and I'd be learning that domain.

I'd be glad to talk about how I could help Flatiron's data engineering team.
