Hello Foley Team,

I'm applying for the Senior Data Engineer role because I like building pipelines that people can trust and then improving them over time.

At Ralli I built the ETL pipeline that ingested betting lines and athlete data from public APIs into a normalized Postgres database on a schedule, owned the data model, and led the team that extended it. At Coordinator I built a video pipeline with storage on MinIO and Postgres, a data-access gateway with scoped, revocable tokens, and the CI/CD that gated every release, so I care about reliability, testing and access control. I've supported LLM pipelines in production too. I haven't used Redshift, Glue or EventBridge, or built CDC and streaming workflows, and I'd be learning those.

I'd be glad to talk about how I could help Foley's data team.
