Hello Hightouch Team,

I'm applying for the Forward Deployed Engineer role. I like work where the hard part is a customer's data, and an agent is only useful when it reads that data correctly.

As founder and CTO of Ralli I built the ingestion pipeline that pulled betting lines and rosters from ESPN's APIs into Postgres and computed live projections from play-by-play data. At Coordinator I built read-only tools that let our LLM agent read data across a user's installed apps, and a gateway that gives third-party apps scoped, revocable tokens with an audit log. At Applied Intuition I built a customer-facing license dashboard and a Zendesk automation that cut support response time from over a day to under an hour.

My SQL has been on Postgres, not Snowflake or Databricks, and I haven't worked on identity resolution. I'd be glad to talk about how I could help Hightouch customers.
