Hello Instacart Team,

I'm applying for the Senior Software Engineer II role on Marketing Enablement & Technology. The posting asks for someone who drives a team's technical roadmap, partners directly with product and marketing leaders, and builds tooling that makes engineers more productive, including AI-assisted development. As a two-time founder/CTO, I've owned the roadmap and sat in the room where growth decisions were made.

At Ralli, the real-time social betting app I founded, I built the pipeline that loaded betting lines and rosters into Postgres, shipped referrals, leaderboards, and notifications, and led the engineering team. This year at Coordinator I built the Python agent runtime and the pipeline that turns reviewed production turns into training data, plus self-hosted CI that runs the end-to-end suite on every release merge. At Applied Intuition I built a license dashboard for the business side that helped close multiple million-dollar deals.

To be direct about gaps: I have seven years of experience rather than eight to twelve, and I haven't worked in ad tech. I'd be glad to talk about whether my background fits what the team needs.
