Hello Roblox Team,

I'm applying for the ML Platform role because I like building tooling that makes other engineers faster.

At Coordinator I ran GPU training and vLLM serving and built the self-hosted CI/CD that gated every release. At Trustless Engineering I built Kubernetes deployments with ArgoCD and Datadog monitoring. I've also been founder and CTO twice, so I'm used to owning systems end to end.

I'd be glad to talk about how I could help Roblox's ML platform.

Jack Sturtevant
