Hello Roblox Team,

I'm applying for the ML Infra role on Asset Safety because it sits between two things I've built: ML serving systems and vision pipelines.

At Coordinator I ran GPU training and vLLM serving and built vision-language pipelines over video, with the CI/CD around them. At Trustless Engineering I built Kubernetes deployments with ArgoCD and Datadog monitoring for an ML network.

I'd be glad to talk about how I could help keep Roblox's platform safe.
