Hello Twilio Team,

I'm applying for the Senior Analytics Engineer role. The posting asks for someone who owns ambiguous data projects end to end and works with stakeholders to define and reconcile the metrics a business runs on.

At Ralli, the company I founded, I designed the data model and ETL that loaded live betting lines and rosters from ESPN's APIs into Postgres. At Applied Intuition I built a license dashboard showing customers' product usage that helped close multiple million-dollar deals. This year at Coordinator I built the pipeline that turns reviewed production conversations into training data.

I haven't used AWS Glue, Athena, or LookML, and analytics engineering hasn't been my title; my data work has been part of building products. I'd be glad to talk about whether that fits what the team needs.
