Hello Twilio Team,

I'm applying for the Software Engineer L3 role. I like backend work where the service has to stay correct under load and the next engineer can still read the code.

At Coordinator I built a Go data gateway with scoped, revocable tokens, rate limits, and an audit log, covered by 28 tests, along with Python agent-runtime services and the self-hosted CI/CD that ran our end-to-end suite on every release merge. As founder and CTO of Ralli I built NestJS and Postgres services with live WebSocket updates and Datadog tracing. I use Claude Code every day and review what it writes as I would a colleague's code.

I haven't run Kafka in production, and my Terraform experience is working knowledge rather than deep ownership. I'd be glad to talk about how I could help your team.
