Hello Verkada Team,

I'm applying for the Senior Backend Engineer role on the Device Platform because I like building services that other systems depend on.

The backend I shipped at Coordinator was Go, and I built a data-access gateway with scoped, revocable tokens. At Hydraze I built an IoT sensor network on Raspberry Pi and Arduino with a platform to view device data. I'm short of the 6+ years in the posting.

I'd be glad to talk about how I could help Verkada.
