Hello SoFi Fraud Data Team,

I'm applying for the Senior Data Engineer role on fraud data. I live in Utah, near Cottonwood Heights, and I'm looking for a data role where the pipelines matter to real decisions.

At Ralli I designed the Postgres data model and built the pipeline that loaded betting lines and rosters from ESPN's APIs every 12 hours, which fed live projections. At Coordinator I built a video data pipeline with metadata in Postgres feeding model scoring, and a pipeline that turned reviewed production turns into training data. At Applied Intuition I built the license dashboard that showed clients their usage trends, and it helped close multiple million dollar deals.

To be direct about gaps: I haven't used Snowflake, dbt or Airflow in production; my pipelines have been Python, SQL and scheduled jobs on Postgres. Data engineering has been part of my roles rather than my whole title.

I'd be glad to talk about the role.
