Hello Mercury Team,

I'm applying for the Frontend Engineer, Design Systems role. I like the posting's focus on turning recurring product needs into components teams can rely on, and on using AI tools while still judging and testing what they produce.

Most of my seven years has been building React and TypeScript front ends for products I helped design: at Ralli, a real-time betting app I founded, a Next.js web app with live WebSocket updates; at Lancer, a freelance marketplace with quotes, checkpoints, and in-app messaging; and real-time trading interfaces for Cypher and Tsunami Finance. I haven't held a design-systems role, but on each of those products I was the one deciding which pieces to share and how they should behave.

I use Claude Code every day and review what it writes the way I'd review a colleague's code. I'd be glad to talk about how I could help Mercury's design systems team.
