Hello Shopify Consumer Agents Team,

I'm applying for the Senior Staff Applied ML Engineer role on Consumer Agents. The work it describes (student models, evaluation you can trust, agentic memory) lines up closely with what I built this year, though at a smaller scale and a lower level than Senior Staff.

At Coordinator I ran supervised fine-tuning on H100s across five sports with corpus curation and a feedback-retraining loop, and served the models quantized with vLLM. I built the agent runtime with group-scoped memory pruning and voice-agent memory, and evaluated with scoring harnesses and reviewed production turns rather than by eye. I timed agent tiers on real requests and routed by the result.

To be direct about gaps: I have seven years and have led as a founder/CTO, not at Senior Staff level inside a large company. I haven't done knowledge distillation in production.

I'd be glad to talk about whether there's a fit on the team, at this level or another.
