# Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

## SUMMARY

Software engineer first and two-time founder/CTO with seven years of production software. I build maintainable data pipelines in Python and SQL: ETL from external APIs into Postgres, a video data pipeline feeding model scoring, and a reviewed-turn training-data pipeline, with async services and WebSockets around them.

## SKILLS AND PROFILES

**Skills** : Python | SQL | Postgres | ETL / Data Pipelines | Data Modeling | Async Systems / WebSockets | APIs | Training-Data Pipelines | Go | TypeScript | CI/CD | Docker | Datadog | AWS / GCP
**Profiles** : LinkedIn jack-sturtevant | Github jacksturt

## EXPERIENCE

**Coordinator, LLC** Remote
*Lead Engineer (Contractor)* March 2026 – September 2026

- Video storage and inference pipeline: clips and frames on MinIO with Postgres metadata, feeding VLM scoring
- Reviewed-turn training-data pipeline and feedback-retraining loop for fine-tuned LLMs served with vLLM on H100s
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge, cheaper per run
- Go data gateway for third-party apps: scoped, revocable, device-bound tokens, refresh-reuse rejection, rate limits, audit log
- Worked agentic-first (Claude Code, Cursor) on every part of the stack, with tests gating each release

**Ralli** Remote
*Founder / CTO* January 2025 – October 2025

- Founded a real-time social sports betting platform; led the engineering team (full-time from July 2025)
- Designed the Postgres data model and ingestion cadence; built the betting-line and roster ETL pipeline from ESPN APIs
- Built NestJS/Drizzle/Postgres domain services with live WebSocket updates and Datadog tracing

**Independent Engineer** Remote
*Founder / Freelance Engineer, startups* October 2021 – December 2024

- Lancer (2022 – 2023): founder/CTO of a freelance platform (Next.js, tRPC, Prisma, escrowed payments); led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability

**Applied Intuition** Mountain View, CA
*Software Engineer* July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Developed (full stack) intranet for managing developers, teams, and customers, vastly improving efficiency of all employees
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

## EARLY EXPERIENCE

- Hydraze (CTO, 2019 – 2020): IoT sensor network collecting facilities data, plus a platform to view device and usage data
- AWS (SDE Intern, 2019): enabled mathematical verification of AWS products through compilation from Dafny to Java
- Java and C++ (college and early career): learned to code on Java; C++ / CUDA for robotics and ML research

## EDUCATION

**A. James Clark School of Engineering, University Of Maryland** **GPA: 3.93**
*Bachelor of Science in Computer Engineering, University Honors, Cum Laude*
