Hello GitLab Infrastructure Platforms Team,

I'm applying for the Site Reliability Engineer role on Infrastructure Platforms, at whichever level fits best. I like the single-application approach.

As a founder and contract lead, I have owned production end to end. At Ralli I ran our NestJS/Postgres services on managed cloud with Datadog tracing and live WebSocket traffic. At Coordinator I ran self-hosted GPU services on Linux, built the self-hosted CI/CD that ran our end-to-end suite on every release merge, and built production tooling rather than only configuring it. At Trustless Engineering I set up Kubernetes deployments with ArgoCD and Datadog observability. I read and write Go comfortably.

To be direct about gaps: I haven't held an SRE title or carried a formal 24/7 on-call rotation at scale, and my Kubernetes work has been deployments rather than operating clusters. I'd expect to start at the intermediate level.

I'd be glad to talk about where I'd fit.

Jack Sturtevant
