Hello GitLab Nonlinear Productivity Team,

I'm applying for the Staff Backend Engineer role on Nonlinear Productivity. Deciding what "proven" means before something ships is how I've run agentic work this year.

At Coordinator I built a tiered agent runtime with multi-step orchestration, tool use, memory and recovery paths. I timed single-shot against agent-loop tiers on real requests; single-shot was 4-6x faster, so I added it as a fourth tier instead of sending everything through the loop. I wrote the Go agent tools with exact contracts, the reviewed-turn training-data pipeline, and the CI that gated each release. I write Go and Python daily and have written Rust.

To be direct about gaps: I have seven years rather than a long Staff track, and I've led as a founder/CTO rather than as a Staff engineer inside a larger company. I'd be glad to work with the India-based group across time zones.

I'd be glad to talk about the role.

Jack Sturtevant
