Jack Sturtevant

jack@sturt.io | sturt.io | 508-951-0133

SUMMARY

Backend engineer and two-time founder/CTO with seven years of production software: REST APIs and backend services, LLM features built into those services, CI/CD, and observability. I work agentic-first every day with Claude Code and Cursor. Python, TypeScript/Node.js, Go, Postgres.

SKILLS AND PROFILES

Skills : Python | REST API Design | TypeScript / Node.js | NestJS | Go | SQL / Postgres | WebSockets
Claude Code / Cursor | LLM Integration | Docker | Kubernetes | AWS / GCP | CI/CD | Datadog
Profiles : LinkedIn jack-sturtevant | Github jacksturt

EXPERIENCE

Coordinator, LLC Remote
Lead Engineer (Contractor) March 2026 – September 2026

- Go data gateway API for third-party apps: scoped, revocable tokens, rate limits, audit log, and per-app data storage
- Grew the gateway into an app store: template registry and 3-way merge reconciliation for template updates
- Containerized CV service: async job tracker API, results in Postgres, clips in object storage, inference on GPU
- Served fine-tuned LLMs with vLLM on H100s behind the app; built a feedback-retraining loop from reviewed turns
- Timed single-shot vs. agent-loop tiers on real requests; single-shot was 4-6x faster, so I added it as a fourth tier
- Built self-hosted CI/CD for the end-to-end suite: serial/parallel job split, runs on every release merge
- Shipped production voice messaging (speech-to-text and text-to-speech) in the web app

Ralli Remote
Founder / CTO January 2025 – October 2025

- Founded a real-time social sports betting platform and led the engineering team (full-time from July 2025)
- Built a dozen NestJS/Drizzle/Postgres backend domain modules (games, matchups, lines, friends, leaderboards, notifications) with live WebSocket updates and Datadog tracing
- Built the betting-line and roster ingestion pipeline (ESPN APIs) and live projections from play-by-play data

Independent Engineer Remote
Founder / Freelance Engineer, startups October 2021 – December 2024

- Lancer (2022 – 2023): founder/CTO of a freelance platform (Next.js, tRPC, Prisma, escrowed payments); led 7 people
- Banger (2024): interim CTO; built a tokenized-tweet trading platform end to end in 8 weeks, which led to a $250K raise
- Trustless Engineering (2024): Kubernetes deployments (ArgoCD), ML infrastructure, and Datadog observability

Applied Intuition Mountain View, CA
Software Engineer July 2020 – October 2021

- Helped close multiple million dollar deals through creation of a license dashboard showing client product usage
- Developed (full stack) intranet for managing developers, teams, and customers
- Cut average customer support response time from > 1 day to < 1 hour with a custom, automated Zendesk solution

EARLY EXPERIENCE

- Hydraze (CTO, 2019 – 2020): IoT sensor network (Raspberry Pi + Arduino) and device-management platform
- AWS (SDE Intern, 2019): enabled mathematical verification of AWS products through compilation from Dafny to Java
- Java and C++ (college and early career): learned to code on Java; C++ / CUDA for robotics and ML research

EDUCATION

A. James Clark School of Engineering, University Of Maryland **GPA: 3.93**
Bachelor of Science in Computer Engineering, University Honors, Cum Laude
